Website, Github 1,500 stars, Stackoverflow 9,000 reputation, LinkedIn, Youtube

Skills

Javascript, Reactjs, Django, Python, numpy, pandas, celery, Bootstrap, React Native, Redux, Postgres, Nodejs, Amazon s3, ec2, redshift, sagemaker, CSS, Transition animations, keyframe animations, Chrome lighthouse, Mobile Responsive Design, lodash, Box Model, webpack, SASS, JIRA, Kanban

Experience

October 2022 - May 2023

Hayden5, New York, NY – *Software Engineer Invoices* – https://hayden5.com/

- Developed a project management tool for the video industry using Python, javascript and sql.
- Upgraded Django 1.9 app to django 4.1. Upgraded app from python 2.7 to python 3.9. Upgraded broken websockets installation using django-channels.
- Refactored nontrivial UI user flows in React.js to adhere to new specs from product manager.
- Refactored emails to work in development and production on Amazon SES.
- Worked with nontechnical stakeholders to spec out Invoice PDFs and generated them in a scalable way on AWS.
- Rewrote docker-compose configuration to preserve database info and connect to celery workers correctly.
- Interfaced with SignNow third party API to store financial information. Securely stored signed documents like W2s, contracts and tax forms for contractors.

January 2020 - September 2022

Rayogram, New York, NY – *Tech Lead*– http://alkeoncapital.com/

- Developed calendar for Hedge fund that adhered to all SEC requirements and integrated with their bloomberg terminal. Software is responsible for over $60B in assets under management. Lead a team of 4 (2 junior frontend, 1 devops, 1 backend). Using Django, Flask, Celery
- Developed asynchronous web services to parse emails over IMAP, imap-tools (rfc3501), IMAPClient
- Created custom processes using magic links, so that stakeholders could more efficiently manage their employees and treasury investments via email.
- Developed custom visualizations using jquery, datatables.js, D3.js
- Built python service to perform image processing on monthly pdf reports to investors. pdf2image, img2pdf, poppler, pdftoppm, RFC822 (email)

February 2018 - September 2019

Huge Inc, New York, NY – *CMS Engineer* – https://getaway.house/

- Helped organization migrate away from spreadsheets and onto a custom internal content management system written in React.
- Developed web applications using React, css transition animations, node.js, websocket, rabbitmq, jenkins and amazon ECR.

February 2016 - February 2018

Capsule Corp, New York, NY – *Founding Engineer* – http://capsulecares.com/

- 5th Engineer inheriting a React, golang webapp. Added functionality within a day.
- Added Segment.io events recording user actions for improving conversion funnel and user dropoffs.
- Elicited requirements and implemented large parts of a non-trivial internal employee workflow application used by over 80 people daily to perform their work.
- Inherited and extended a Node.js application that performed SQL query reflection from a GET request to a query against a Microsoft SQL database within a corporate network.
- Developed an ETL pipeline using python, numpy and pandas. The pipeline would extract data from the Django/Postgres database on aws rds and load the data into a Datawarehouse on aws redshift.

August 2014 - July 2015

Freecodecamp, San Francisco, CA – *Software Engineer* - https://freecodecamp.org

- Wrote frontend using earliest versions of React.js
- Managed Node.js infrastructure on DigitalOcean and using pm2. Infrastructure served over 10,000 concurrent connections at peak.

Open Source Projects

- Django-flaggit - forked a django app to fix a bug and support modern versions of django
- React Native Contacts - the most popular module for loading phone contacts in React. Written in Javascript, Objective-C and Java.
- Sign in With Ethereum - a minimal and portable example of how to support sign-on to a web application with a web3 wallet.

Education

2008 - 2012

Worcester Polytechnic Institute, Worcester, MA – *Bachelor's in Computer Science*

Completed coursework in Computer Networks, Databases, Web Applications, Algorithms, Artificial Intelligence, Software Development, Object Oriented Design and Functional Programming.
